1 Introduction

On Camp is a web application that allows us to view various campgrounds in our area with a short description. Once we log-in or sign-up, we can create our own campgrounds which will be provided with the image, title you want to give to the image and a suitable description associated with the image. We can also leave a comment or feedback for a specific campground.

2 Technologies to be used:

- Front-end: HTML, CSS, Javascript, Bootstrap for responsive layout

- Back-end: NodeJS, ExpressJS, REST, Authentication, Authorization And PassportJS.

- MongoDB is going to be our datastore for this application.

- This project will be source versioned with git.

In addition, one will also be able to see the rates of stay at these camps and also will be able to compare it with other camps in that region.
